

PROJECT 1

Internship Report

Data Cleaning and Preparation

Objective

To clean a raw dataset by identifying missing values, checking duplicate records, validating data formats, and preparing a reliable dataset for analysis.

Dataset Overview

Records: 1200

Columns: 14

STEPS TAKEN TO PERFORM DATA CLEANING

STEP 1: Converted the Main Dataset into a Table

- Shortcuts = Ctrl + A to select the range Ctrl +T to transform into a table

STEP 2: Exported the Table into Power Query

- Data Tab – From Table/Range

STEP 3: Removed Errors and Changed Data Types of Each Column

- Order_ID -Text
- Date - Date Type
- Customer_ID - Text

- Product - Text
- Quantity - Whole Number
- Unit_Price - Currency
- Shipping_Address - Text
- Payment_Method - Text
- Order_Status - Text
- Tracking_Number - Text
- Items_In_Cart - Whole Number
- Coupon_Code - Text
- Referral_Source - Text
- Total_Price - Currency

STEP 4: Handled Blank Cells

- Coupon_Code Column contained 309 blank cells
- Replaced the blanks with “NO COUPON”

STEP 5: Removed Duplicates

- Removed duplicates from the Order_ID Column

STEP 6: Created Additional Columns

- Extracted the Year and Month from the Date Column.
- Renamed Month Name Column to Month
- Reordered Year and Month Column

STEP 8: Formatted Columns

- Added the Suffix “s” to the texts in the Product Column.

STEP 9: Filtered Rows to Check for Errors Missed.

STEP 10: Exported Data from Power Query back into Excel.

- Home Tab – Close and Load

STEP 11: Renamed Newly Transformed Data Table to Cleaned_Data
